

elastomeric bag; and wherein the tubular shell includes a first end and a second end, and the tubular shell includes an outwardly extending first lip adjacent the first end of the tubular shell and a outwardly extending second lip adjacent the second end of the tubular shell, the first and second lips defining a central section within which the viscoelastic hand surface is positioned, wherein the viscoelastic hand surface has a thickness between approximately  $1/16$ " and  $1/4$ " and the central section has a depth as defined by the first and second lips which is substantially the same as the thickness of the viscoelastic hand surface such that the first and second lips retain the viscoelastic hand surface in position on the tubular shell. ✓

---

21. (Amended) A grip adapted for attachment to an implement including a handle, comprising:  
a longitudinally extending tubular shell including an inner surface shaped and dimensioned for attachment to the handle of the implement and an outer surface; and

a viscoelastic hand surface having a thickness between approximately  $1/16$ " and  $1/4$ " secured about the outer surface of the tubular shell, wherein the viscoelastic hand surface is a viscous liquid material contained within an elastomeric bag; and wherein the tubular shell includes a first end and a second end, and the tubular shell includes an outwardly extending first lip adjacent the first end of the tubular shell and a outwardly extending second lip adjacent the second end of the tubular shell, the first and second lips being substantially the same size as the thickness of the viscoelastic hand surface such that the first and second lips are being shaped and dimensioned to retain the viscoelastic hand surface in position on the tubular shell.
